Dec 22, 2005

DOCUMENT-IDENTIFIER: US 20050281766 A1

TITLE: Method of improving the aesthetic appearance of epithelia

Summary of Invention Paragraph:

[0012] U.S. Pat. No. 5,124,313 provides topical compositions having a retinyl ester-polypeptide complex, specifically a retinyl palmitate-polypeptide complex.

First Hit Fwd Refs

End of Result Set

L10: Entry 5 of 5

File: USPT

Jun 23, 1992

DOCUMENT-IDENTIFIER: US 5124313 A

TITLE: Methods of improved skin care and the treatment of dermatological conditions

Abstract Text (1):

The present invention provides methods for treating or preventing various dermatological conditions in humans, such as dry, cracked or damaged skin resulting from exposure to sunlight (ultraviolet radiation) and wind, aging effects, general skin dryness, e.g., deficient moisture content, and mild acne. These methods comprise applying an effective amount of a composition to the affected target area, the composition comprising a retinyl palmitate-polypeptide complex of apparent molecular weight of from about 5,000 to about 7,000 daltons, and an isoprenoid compound, e.g., a carotenoid such as beta-carotene.

Brief Summary Text (2):

The present invention relates to methods of improved skin care and the treatment and/or prevention of various human dermatological conditions by applying to the skin or the involved mucous membranes an effective amount of a composition comprising retinyl palmitate polypeptide complex and a isoprenoid. The dermatological conditions include skin damage due to sun (ultraviolet light), wind and general climatic exposure, aging effects (facial lines), excessive dryness and mild acne.

Brief Summary Text (12):

The present inventors have discovered that topical products comprising an effective amount of a composition comprising a retinyl palmitate polypeptide complex and an isoprenoid can be applied to the skin, mucous membranes, lips, hair and nails resulting in general improvement of numerous conditions. These conditions include skin damage due to sun (ultraviolet light), wind and general climatic exposure, aging effects (facial lines), excessive dryness and mild acne.

Detailed Description Text (3):

The present invention provides a number of methods for treating and/or preventing human dermatological conditions, all of which comprise applying to the skin or mucous membrane area an effective amount of a composition comprising retinyl palmitate polypeptide complex and an isoprenoid in a suitable vehicle. The amount of this composition is effective to treat or prevent the various dermatological conditions which will now be discussed.

Detailed Description Text (16):

The retinyl palmitate-polypeptide complex (RPPC) is a solid substance having a yellow to light orange color and a slight carrot odor. It is dispersible, but only partially soluble in water, and is partially soluble in alcohol, acetone and other organic solvents. The RPPC contains a low level of essential fatty acids (approximately 2.5% by weight), lipoproteins and carbohydrates as well as some protein-bound betacarotene. The moisture content of the RPPC is no greater than about 7.0% by weight. Following alkaline hydrolysis and using the USP assay for retinol, RPPC typically shows an activity of not less than about 250,000 i.u. per gram.

Detailed Description Text (17):

Under these above-described conditions, an impure retinyl palmitate-polypeptide complex (RPPC) is obtained which consists of approximately 25%, by weight, of retinyl palmitate (or about 250,000 i.u. per gram) and approximately 60%, by weight, of polypeptide carrier (PC). which, in addition, contains bound water, lipoproteins, carbohydrates and other impurities. The binding site between the PC and the retinyl palmitate appears to be the ester carbonyl group of the retinyl palmitate where hydrogen bonding takes place. The molecular weight of the polypeptide complex is approximately 5,000 to about 7,000 daltons, i.e., less than the molecular weight of CRBP. Polypeptides of this size can be absorbed through the skin when topically applied.

Detailed Description Text (18):

It should be understood that the molecular weight of the retinyl palmitate-polypeptide complex may vary within a certain range due to the fact that the product is derived from natural sources which are variable themselves. However, in most instances, the molecular weight of, the retinyl palmitate-polypeptide complex (RPPC) will comprise from about 5,000 to about 7,000 daltons, although as stated above, this range may vary.

Detailed Description Text (22):

The compositions, RPPC, used in accordance with the methods provided by this invention are employed in effective amounts to function as an effective skin care material as well as to treat or prevent the above-described dermatological conditions. The amount of retinyl palmitate polypeptide complex may range from about 0.02 to about 5.0% by weight, preferably from about 0.2 to about 2.0%, by weight. The amount of the isoprenoid may range from about 0.01 to about 1.5%, by weight, preferably from about 0.1 to about 0.5%, by weight, of the total RPPC composition.

Detailed Description Text (47):

In contrast to retinyl palmitate, which displays strong hydrophobicity, and a physical gelatin-retinyl palmitate blend (beads) which shows hydrophilicity, but is strongly hydrophobic, the retinyl palmitate-polypeptide complex exhibits good hydrophilic properties especially at increasing temperatures as well as adequate lipophilicity.

Detailed Description Text (51):

A standard skin stripping procedure was conducted on 10 volunteers, comparing RPPC with retinyl palmitate oil, formulated in an emulsion base. The purpose of the study was to compare the topical absorption properties of retinyl palmitate (Roche Laboratories, Nutley, N.J.) - RP - with retinyl palmitate polypeptide (Brooks Vitazyme.TM.A, South Plainfield, N.J.) i.e., RPPC.

Detailed Description Paragraph Table (2):

	Retinyl palmitate, USP (RP) Potency: 1.5 MM i.u./Gm
Retinyl palmitate gelatin beads	Potency: 500,000 i.u./Gm (RPG)
<u>Retinyl palmitate polypeptide</u>	Potency: 250,000 i.u./Gm (RPPC) (Vitazyme .TM. A, Brooks Industries, Inc., South Plainfield, New Jersey)

High Personal Care Products L.P.

BROOKS INDUSTRIES inc.

Cosmetic Ingredients & Ideas®

VITAZYMES® Protein Bonded Vitamins

Brooks Industries, Inc., offers a wide variety of natural protein complex vitamins, called VITAZYMES®. VITAZYMES are manufactured by taking natural GRAS plant derived protein substances which are known for their natural vitamin content. These substrates are complexed with a measurable level of GRAS vitamin until a stable reaction product is reached. VITAZYMES offer a safe delivery system for cosmetic vitamins. They are used in various skin care formulations for the delivery of vitamins to the skin.

Man = Mannose

GlcNAc = N-acetylglucosamine

V = Vitamin

1 - Sulfated structure representing a VITAZYME
